

Customer: NHS via Morgan Sindall

Project: North Lincolnshire and Grimsby Hospital Trust

Date Range: 30th January – 8th August 2023

Project Value: £38,852.04

Go Green have been fortunate enough to work with Morgan Sindall Construction for over 18 months, supporting their waste management with projects across the NE & Yorkshire. Early on, our contact at Morgan Sindall asked us to quote for the waste management elements for a project they were completing on behalf of North Lincolnshire and Grimsby Hospital Trust.

The project itself required all existing M&E services and theatre finishes to be fully removed at both hospitals. Challenges included the fact that both theatres were constantly in use at both sites which meant that all works had to be carried out behind a fully infection control compliant 60-minute fire rated hoarding. As part of project planning, Morgan Sindall ensured that fortnightly look ahead programmes were provided to the Trust and that all site teams had daily touch point communication with the theatre staff to enable all works to continue with minimal disruption.

Due to our knowledge of the industry, Go Green were appointed as waste partners by Morgan Sindall; through stringent waste compliance and environmental adherence, we were able to deliver on target with 90%+ recycling rates across both hospitals covering waste streams including Wood, cardboard, soft plastics, metal, and hardcore/concrete. All data, including recycling, cost, movements and operational statistics, was captured and stored through our online customer portal which acts as a centralised hub for customers to manage their waste data. This is also where Morgan Sindall report on their carbon figures for Ad-hoc movements.
